Case Study - Coaster Buses

The Pilbara region of Western Australia has the world's largest open cut iron ore mine. Discovered in 1957, the iron ore deposit contains some of the highest quality iron ore being mined in the world. With the mine operating 24/7, the mine needs to move its fly-in-fly-out (FIFO) workforce to and from the site in addition the mine operators also conduct regular VIP tours of site facilities. The mining company lease five 22 seat coasters from Corefleet for these purposes for a fixed term contract.

Integrated Group, a leading national recruitment provider, won the contract to provide bus drivers to the Newman mine site. Corefleet works alongside Integrated to provide the coaster fleet and Integrated provide reliable and experienced drivers to the mine.

The coasters are stored at Corefleet's Newman premises when not in use and Integrated employees can utilise Corefleet facilities, including storage, office space, lunch room and detailing facilities.

Leasing Toyota Coasters from Corefleet has many advantages; these include regular mechanical servicing intervals performed by our own qualified mechanics, the short term flexibility of leasing and mine specification compliancy.

- In this example Corefleet and Integrated have partnered to deliver an outstanding outcome to our customers.
- Corefleet have workshop facilities that can carry out all aspects of vehicle maintenance and repair. Corefleet's workshops have manufacturer's servicing accreditations and mechanical staff are trained and qualified in all areas of commercial vehicle repair. Our workshops contain all the tools required to carry out repairs and maintenance on vehicles including coasters.
- Corefleet has 40 years' experience in servicing, maintaining and equipping vehicles for industry clients across Australia, in cities, in the country, on mine sites, both above and below ground.

Corefleet and Integrated.

Working together to provide the best solutions for our customers.
